 InvoCare A partner we know well

InvoCare is Australia's largest funeral, cemetery, and cremation services provider. We delivered the FireHawk CRM integration, and we understand both the business and the technology landscape.

~2,000

COUNTRIES (AU, NZ, SG)

High-consequence operations. Every procedure matters. A single failure can cause irreparable harm to a bereaved family.

This work matters to us. We've worked together on FireHawk. We understand your systems, your people, and your purpose.

FireHawk changes everything — training and SOPs can't keep up

SOPs are inconsistent and scattered

No standard format. Spread across SharePoint. Hard to find the current version of anything.

Training volume is massive

300+ videos, 300+ job aids, 40+ SOPs, 22 modules. Traditional production cannot keep pace.

Small changes trigger huge rework

A minor process tweak means manually updating videos, QRGs, job aids, and SOPs across the board.

Frontline staff need fast answers

"How do I do this part of my job?" — staff need to find the right guidance quickly, not search through folders.

Key message

In a high-consequence environment, training content that falls out of sync with live workflows is not defensible.

THE SOLUTION

What InvoCare asked for

A single-source, AI-enabled content engine that records workflows once and generates everything from that source.

KEY CAPABILITIES

Capture once. Generate everything. Update in one place.

- 1 **Capture FireHawk workflows** as the single source of truth — screen recordings, filmed procedures, existing docs, SME input
- 2 **Auto-generate SOPs, QRGs, job aids, and training videos** — consistent format, no specialist production skills
- 3 **Regenerate everything when a workflow changes** — update once, all dependent content updates with it
- 4 **Human review and sign-off** — OPS support team triggers updates, business reviewers approve before publishing
- 5 **Easy access for frontline staff** — QR codes, search, quick lookup. "How do I do this?" answered in seconds
- 6 **Enterprise formats, full ownership** — MP4, PDF, DOCX into SharePoint and LMS. No vendor lock-in
- 7 **Accessible and multilingual** — captioning, narration, and translation to support diverse roles across AU, NZ, and Singapore
- 8 **Security and compliance built in** — access controls, audit logging, ability to redact sensitive information in captured workflows

Clear audit trail from SOP to training artefact to update — every change tracked.

HOW IT WORKS

Record once, generate everything, keep it current

Capture

Screen recordings,
filmed procedures,
and SME input

Generate

AI creates videos,
SOPs, QRGs, and job
aids automatically

Review

OPS team and
business reviewers
approve before
publishing

Publish

Content goes to
SharePoint, LMS, and
staff access points

Update

Process changes? Re-
capture once,
regenerate all linked
content

Built on your Microsoft stack

Azure AI Services, SharePoint, Entra ID. Integrates with
what you already have.

InvoCare owns the solution

No per-learner licensing. Your L&D team operates
independently after handover.

PROPAGATION TIMELINE

- 27 Mar 2026, 09:15
SOP Updated
Joanne Place approved the addition of pacemaker detection to the pre-cremation verification procedure.
 Reviewed by Fraser Clegg
- 27 Mar 2026, 09:16
Affected artefacts identified
3 training materials and 1 assessment linked to SOP-CR-003 flagged for regeneration.
 Video, QRG, Job Aid, Competency Check
- 27 Mar 2026, 09:17
Training video regenerating
ID Verification Walkthrough — re-recording with updated pacemaker detection step.
- 27 Mar 2026, 09:18
QRG regenerated
Pre-Cremation Checklist updated with new step. Awaiting SME review before publication.
 Review required
- 27 Mar 2026, 09:18
Assessment updated
New question added to Competency Check: Pre-Cremation ID — "Describe the pacemaker detection procedure."
- Pending
Staff notifications
847 staff across NSW, VIC, QLD, WA, and NZ flagged for retraining on updated procedure.
 Notifications will send once all artefacts are published

BEST MATCH

SOP-CR-003

Pre-Cremation Identification Verification

 Updated 15 Mar 2026  12 steps

QUICK ANSWER

- 1 Confirm deceased identity against case file documentation and wristband
- 2 Cross-check with digital record in FireHawk (Case ID, next of kin authorisation)
- 3 Verify cremation authorisation form is signed and dated by authorised representative
- 4 Check for medical implants — scan for pacemaker and record result in FireHawk
- 5 Obtain medical referee clearance (NSW: written advice required per SESLHD register)

RECOMMENDED APPROACH

Prove it small. Scale with confidence.

We start with a small proof of value before committing to scale. Each phase builds evidence and reduces risk.

PHASE 1

Prototype

Test the concept end-to-end on the deceased handling process — an operationally critical, high-consequence workflow that spans FireHawk and physical procedures.

PHASE 2

Pilot

Validate with real users and the OPS support team. Test the review and sign-off workflow. Refine scope and estimates for production.

PHASE 3

Production

Scale to the broader FireHawk rollout. Embed into BAU operations and L&D processes.

PHASE 4

Support

Handover to InvoCare. Ongoing internal operation and incremental improvement.

Why start here? Deceased handling is representative of the broader FireHawk challenge — it combines system steps, physical procedures, SOPs, and job aids. If the approach works here, it works everywhere.

Timeline and investment

Production and Support phases are dependent on the results from the Proof of Value.

All pricing is **indicative only** and subject to detailed scoping.

We've worked with you before. We understand your business.

We know what good looks like for your people.

Let's build this together.
